

Shipping 2050

Onboard the MV Balmoral - An exciting venue for volunteer engineers

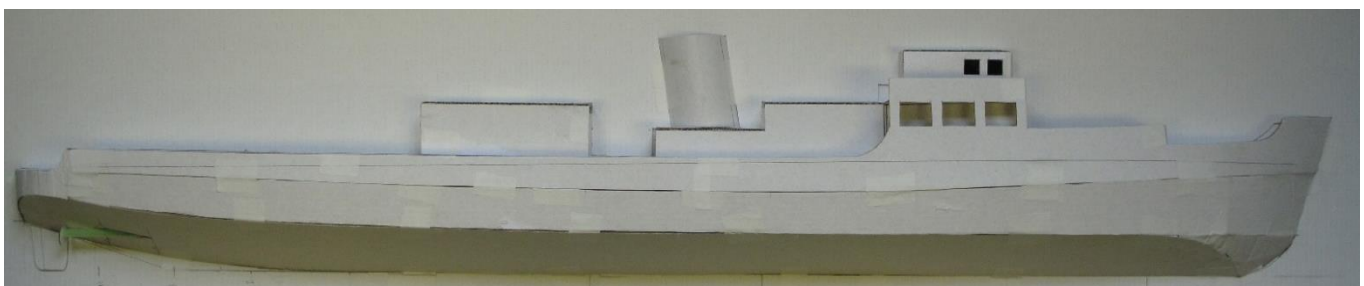

Build a Ship on a Ship – supporting 13 to 15 year olds
Volunteer engineers are required for one or more days on
October 10th 11th 12th 13th 2017 – MV Balmoral Wapping Wharf / Bristol BS1 4RH

The programme is led by specialist facilitators and we require a team of STEM ambassadors interested in the maritime engineering industries. Volunteers are needed -

1. Experts/ spokespeople to provide interactive displays or presentations about what will be needed in the future and current and future innovations in maritime engineering
2. Engineers to mentor students in small teams to complete a design-and-build challenge

Students will explore the ship moored in Bristol's Historic Floating Harbour. With the help of volunteers they will work as a team to gather the parts and the information needed to build a metre long model boat. The emphasis is on teamwork and construction skills that result in each team presenting an adapted, annotated model that shows learning about what sort of ships will be needed in 2050.

Engineers from all engineering sectors are welcome
